**Subject: MISSB grant application – IPATEC Support**

**31st July 2017**

**To Whom It May Concern:**

I am writing to express my full support for the MISSB grant application entitled “Millennium Institute for Integrative Systems and Synthetic Biology”, in which Francisco Cubillos participates as Associate Researcher. Our teams and Institutes are interested in different genetic approaches for the generation of new strains and hybrids for the brewing industry, particularly focusing on the needs of the Patagonian Region. In this context, my group is particularly interested in working together with Dr Cubillos to phenotype, characterise and study through different OMICs previously obtained isolates for the beer industry, either local or international producers. Certainly, isolating, generating and characterising new species and strains will be of interest for our IPATEC Institute research center and for the international scientific community.

Sincerely,

Dr. Diego Libkind
